

CLAIMS

I claim:

1. An apparatus comprising:

a base having first and second slots;

a cold storage unit placed on top of the base;

wherein a first prong of a forklift can be inserted into the first slot and a second prong can be inserted into the second slot;

and wherein with the first prong inserted into the first slot and the second prong inserted into the second slot, the forklift can lift up the base and the cold storage unit.

2. The apparatus of claim 1 wherein

wherein the base has third and fourth slots;

wherein the first prong can be inserted into the third slot and the second prong can be inserted into the fourth slot;

and wherein with the first prong inserted into the third slot and the second prong inserted into the fourth slot, the forklift can lift up the base and the cold storage unit.

3. The apparatus of claim 2 wherein

the first and the second slots are substantially perpendicular to the third and the fourth slots.

4. A method comprising the steps of:

placing a cold storage unit on top of a base;

inserting a first prong of a forklift into a first slot of a base and a second prong of the forklift into a second slot of the base; and

with the first prong in the first slot and the second prong in the second slot using the forklift to lift up the base and the cold storage unit.

5. The method of claim 4 wherein

inserting the first prong of the forklift into a third slot of the base and the second prong of the forklift into a fourth slot of the base;

wherein the first and second slots are substantially perpendicular to the third and the fourth slots; and

with the first prong in the third slot and the second prong in the fourth slot using the forklift to lift up the base and the cold storage unit.
